PART 1

Problem Statement

Problem Statement

At the time of uploading the Placement and Internship Call letters, the Placement Coordinator is solely responsible for uploading all the student's call letters and update their records, so it takes a lot of time for this process.

PART 2

Introduction

Introduction

- **This project is dynamic maintenance of students placements and internship call letters which can be later accessed easy for NAAC and NBA inspection.**

- **Each student is given a login id to view all their details , statuses and can download their call letters.**

- **It reduces the workload over the placement coordinator.**

PART 3

Requirement Specifications

Functional

Non-Functional

Functional Requirements

- **Coordinator or Student has the ability to Login.**

- **User can have advanced Search Option.**

- **Coordinator can upload or download Student's Intern/Offer letter.**

- **The Coordinator can Update Student records.**

- **The coordinator has given authorization to the database.**

Non Functional Requirements

Performance Requirements:

- **User Interface should be compatible to load HTML, CSS, Java Script pages in front end.**

- **Software Interface should support the OS and Database of the user.**

- **Communication Interface can support all web browsers.**

Safety Requirements:

- **Must maintain two servers one main server and one backup server.**

Non Functional Requirements

Security Requirements

- **User authentication and validation of members using their unique registration number.**

- **Proper accountability which include not allowing a student to see other students account.**

- **Only administrator will see and manage all students details.**

- **Proper user authentication should be provided.**

PART - 4

USERS OF THE SYSTEM

ADMIN

STUDENT

Admin

The main role of the admin is to create individual accounts to students.

They are the one who is responsible for managing:-

- Placements along with the recruitment or placements offer letter.
- Student details along with student accounts.
- Recruitment process of on campus companies.
- Intern and placements details.

Student

- **The main role of student is to add their intern and placement details.**
- **They can able to view their fellow student placement results.**
- **Students can view their profile and can change their respective passwords.**

PART - 5

Existing

Vs

Proposed

Existing System

The current process of collating the internship and recruitment status of individual students is being conducted in a manual way by collecting the information over emails or by oral communication. This collected information is then being sanitized and kept in excel sheets by our esteemed faculty.

Sometimes we miss some information due to manual error or sometimes it is difficult to secure communication with the students to get the required information.
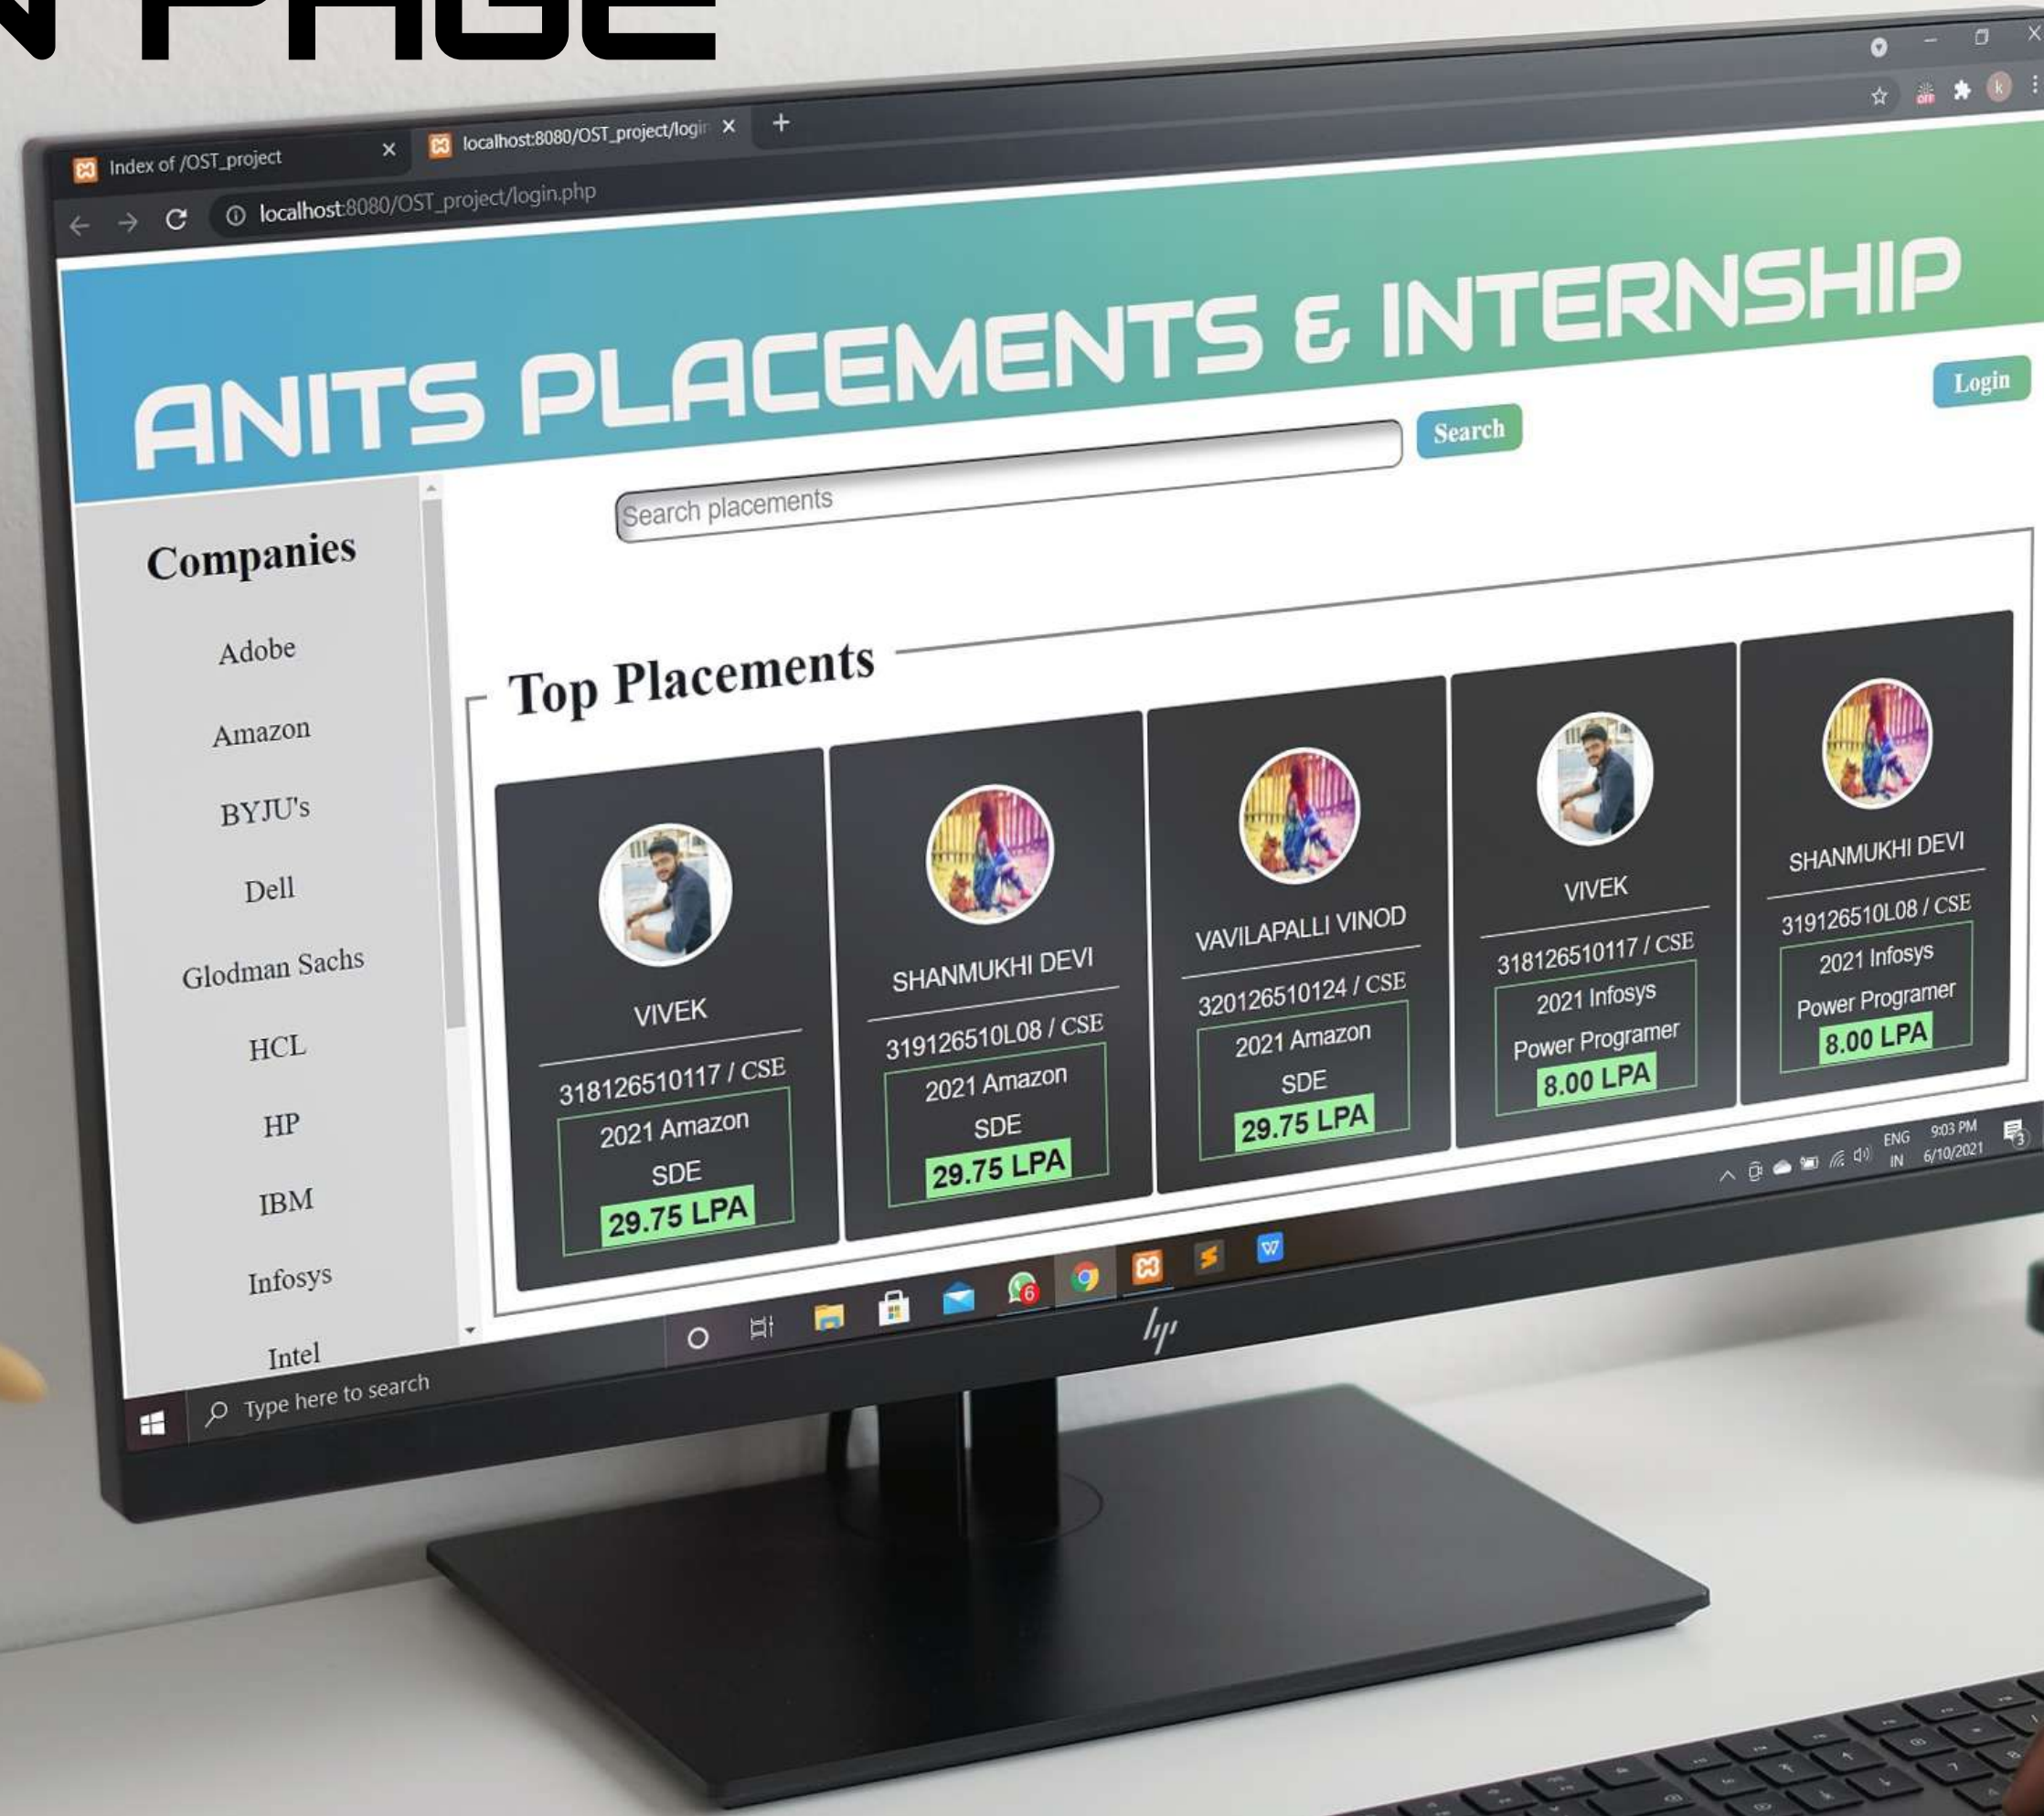

Proposed System

- **The application has dynamic maintenance of students placements and internship call letters where each student is given a login id to view all their details , statuses and can download their call letters.**

- **The Administrator has privileges to add or delete students from the database.**

- **The proposed model aims to overcome drawbacks of existing system by:-**

  -> Reducing the pressure on the coordinator because student themselves can upload their intern/offer letters in their respective accounts.

  -> Because of advanced search, the users can get the placements result in less time.

About Amazon:-

Amazon is an American electronic commerce and cloud computing company based in Seattle, Washington that was founded by Jeff Bezos on July 5, 1994. The tech giant is the largest Internet retailer in the world as measured by revenue and market capitalization, and second largest after Alibaba Group in terms of total sales. The amazon.com website started as an online bookstore and later diversified to sell video downloads/streaming, software, video games, electronics, food, toys, and jewelry. The company also produces consumer electronics—Kindle e-readers and Echo — and is the world's largest provider of cloud infrastructure services (IaaS and PaaS). Amazon also sells certain low-end products under its in-house brand AmazonBasics. In 2015, Amazon surpassed Walmart as the most valuable retailer in the United States by market capitalization. Amazon is the fourth
